

Beyond the regular class schedule, we make it a priority to help pupils realise their full learning potential. We use teaching methods stimulating the desire to read and experiment and bolster motivation, initiative and independence. This is why 5th grade pupils attend a one-semester course in reading skills (LeKo) and one in scientific experimentation (NatEx). Each of these courses is taught by a team of two teachers. This allows the class to work in smaller groups. In 6th grade, those pupils who have not chosen the arts emphasis continue with the reading and science course.
